

Hope Artificial Intelligence

Scenario Based Learning

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.

A) How will you achieve this in AI?

Since we are dealing with employee counts, and it is numbers- we can go for Machine Learning.

B) Find out the 3 -Stage of Problem Identification

Machine Learning, Supervised Learning & Classification

C) Name the project

Employee Resignation Prediction

D) Create the dummy Dataset.

All the input paramters can be graded using range of numbers.

Input 1	Input 2	Input 3	Input 4	Input 5	Output 1
Employee Tenure	Performance Ratings	Engagement Survey Response	Training completion rates	Manager Relation	Likely to Resign
10	Excellent	Satisfied	Good	Cordial	No
2	Not so good	Not satisfied	Average	conflict	Yes
1	Better	unhappy	Poor	Not ok	Yes
7	Good	satisfied	Good	Cordial	No
8	Very good	Satisfied	Good	Cordial	No
3	Better	unhappy	Poor	conflict	Yes
